CONTENTS

Liming the Soil 1
Plant Studies with Radioactive Calcium. David Ririe and Stephen J. Toth 1
Influence of Soil Acidity on Absorption of Calcium by Alfalfa as Revealed by Radiocalcium. W. R. Schmehl, Michael Peech, and Richard Bradfield 11
Movement and Effect of Lime and Gypsum in Soil. David Ririe, Stephen J. Toth, and Firman E. Bear 23
Effect of Particle Size of Limestones on Soil Reaction, Exchangeable Cations, and Plant Growth. T. A. Meyer and Garth W. Volk 37
A Method of Estimating the Reacting Rate of Different Particle Sizes of Limestone. R. P. Thomas and H. M. Gross 53
Influence of Liming Materials on pH Values of Six Maryland Soils. J. H. Hoyert and J. H. Axley 61
Influence of Placement of Lime Compounds on Root Development and Soil Characteristics. D. Longenecker and F. G. Merkle 71
Influence of Form, Fineness, and Amount of Limestone on Plant Development and Certain Soil Characteristics. R. L. Beacher, D. Longenecker, and F. G. Merkle 75
A Nonstationary Method for Determining Thermal Conductivity of Soil in Situ. D. A. de Vries 83
Gaseous Diffusion and Porosity in Porous Media. C. H. M. van Bavel 91
A Numerical Method for Solving the Flow Equation for Water in Unsaturated Materials. Arnold Klute 105
Phytase Activity in Soils. R. H. Jackman and C. A. Black 117
Response of Crop Plants to I and Br. Harvey P. Newton and Stephen J. Toth 127
The Aspergillus Niger Method for Determining Copper in Soils. Marjorie Welsh Dole 135
Effect of Fumigation on Some Chemical Properties of Soils. D. G. Aldrich and J. P. Martin 149
Books and News Note 161
Hydrolysis of Phytate Phosphorus in Soils. R. H. Jackman and C. A. Black 167
Effect of Organic Matter on Phosphate Availability. Joseph D. Dalton, Glenn C. Russell, and Dale H. Sieling 173
Some Characteristics of the Macrostructure of Tropical Soils in Puerto Rico. R. M. Smith and C. F. Cernuda 183
Recovery of Fertilizer Nitrogen by Oats in the Greenhouse. W. V. Bartholomew and A. E. Hiltbold 193
Effect of Tillage Depth on Soil Conditions and Cotton Plant Growth for Two Alabama Soils. V. C. Jamison, I. F. Reed, C. M. Stokes, and Tom E. Corley 203
Porous Tube Device for Sampling Soil Solutions During Water-Spreading Operations. Ray B. Krone, H. F. Ludwig, and Jerome Thomas 211
Freezing Point of Water in Puddled and Unpuddled Soils at Different Soil Moisture Tension Values. Robert B. Campbell 221
Use of Total Yield for Predicting Nitrogen Content of Inoculated Legumes Grown in Sand Cultures. Lewis W. Erdman and Ura Mae Means 231
Stability of DDT and Its Effect on Microbial Activities of Soil. L. W. Jones 237
Collection and Preservation of Soil Profiles. II. Henry W. Smith, R. A. McCreery, and C. D. Moodie 243
Books and News Note 249
Exchangeable Cation Analysis of Saline and Alkali Soils. C. A. Bower, R. F. Reitemeier, and M. Fireman 251
A Concept Concerning the Measurement of Available Soil Nutrients. Maurice Fried and L. A. Dean 263

Criteria for the Characterization of Kaolinite, Halloysite, and Related Mineral in Clays and Soils. Luis Bramao, J. G. Cady, S. B. Hendricks, and Max Swerdlow. 273
Use of Ca45 Labeled Calcium Carbonate in Determining Proportions of Native and Additive Calcium in Lysimeter Leachings and in Plant Uptake. Henry C. Harris, W. H. MacIntire, C. L. Comar, W. M. Shaw, S. H. Winterberg, and S. L. Hood. 289
Radiation Effects of Plants Grown in Soil Treated with Fertilizer Containing P32. James M. Blume. 299
Uptake and Movement of Fertilizer Phosphorus. J. Jordan, C. Simkins, G. Corey, R. Knight, and G. O. Baker. 305
Elongation of Seedlings as a Biological Test of Alkali Soils: I. Effects of Ions on Elongation. Mohamed Naguib Hassan and Roy Overstreet. 315
Books. 327
Estimating the Integrated Soil Moisture Tension in the Root Zone of Growing Crops. Sterling A. Taylor. 331
Use of Dithizone As An Extractant to Estimate the Zinc Nutrient Status of Soils. Ellsworth Shaw and L. A. Dean. 341
Origin of the Base-Exchange Capacity of Clays and Significance of Its Upper Limiting Value. R. P. Mitra and K. S. Rajagopalan. 349
Effect of Iron and Aluminum Oxides on the Release of Calcium and on the Cation-Anion Exchange Properties of Soils. A. Mehlich. 361
Accumulation of the Major Bases and Heavy Metals in Florida Citrus Soils in Relation to Phosphate Fertilization. Walter Reuther, Paul F. Smith, and Alston W. Specht. 375
Leaching of Calcium in a Fine Sandy Loam As Indicated by Ca45. James M. Blume. 383
Determination of Soil Moisture by Neutron Scattering. Wilford Gardner and Don Kirkham. 391
Ionization of Soils and Soil Colloids: III. Potassium-Calcium Relationships in Illite, Kaolinite, and Halloysite. S. A. Barber and C. E. Marshall. 403
Books and News Note. 415
Synthetic Soil Conditioners. 419
Influence of Organic Matter on Aeration and Structure of Soil. J. H. Quastel. 419
Effect of Synthetic Polyelectrolytes on Aggregation, Aeration, and Water Relationships of Soil. R. M. Hedrick and D. T. Mowry. 427
Effect of Synthetic Polyelectrolytes on the Structure of Saline and Alkali Soils. L. E. Allison. 443
Soil and Crop Responses from Field Applications of Soil Conditioners. W. P. Martin, G. S. Taylor, J. C. Engibous, and E. Burnett. 455
Effect of Synthetic Soil Conditioners on Erosion Control. Lloyd E. Weeks and William G. Colter. 473
Mechanism of Clay Aggregation by Polyelectrolytes. R. A. Ruehrwein and D. W. Ward. 485
Index. 493

SUBJECT INDEX

Acidity, influence on calcium absorption by alfalfa, 11–22.
Aeration—
  algenic acid, 422.
  as affected by—
    organic matter, 419–426.
    polyelectrolytes, 427–441.
  factors, 423.
Aggregate—
  effect of polyuronides and polysaccharides, 421.
  mechanism of formation, 485–492.
  size relations, 189.
  stability, 186, 430.
Aluminum, effect on calcium absorption, 18.
Ammonia, as affected by—
  DDT, 238.
  fumigation, 151.
Aspergillus niger method—
  comparison with chemical methods, 142.
  for determining copper in soils, 135–148.
  influence of physical factors, 138.
  mycelial weight and calcium contents, 139.
Autoradiographs—
  alfalfa, Ca45, 6.
  oats, Ca45, 5.
  red clover, Ca45, 7.
  tomatoes, Ca45, 8.
Availability of calcium salts, 2.
Available nutrients, measurement in soils, 263–271.
Base-exchange capacity—
  of—
    illite, 355.
    kaolinite, 355.
    mica, 355.
  origin in clays, 349–360.
Books, *see* end of letter B.
Bromine—
  contents of tomatoes, 132
  response of crop plants to, 127–134.

Calcium—
content of—
alfalfa, 12.
crimson clover, 295.
oats, 295.
red clover, 295.
rye grass, 294.
effect of iron and aluminum oxides on release, 361–374.
ion activities, 406.
leaching from sandy loam, 383–389.
losses from soils by leaching, 25, 386.
migrations in soils and plants, 289–298.
movement in tomatoes, 6.
plant studies with Ca45, 1–10.
Calcium-magnesium ratios—
effect of calcitic and dolomitic limestones on—
alfalfa, 45.
soybean hay, 46.
in soils as related to that in plants, 49.
Carbon dioxide production, relation to phytase activity, 121.
Cation-anion exchange—
effect of iron and aluminum oxides, 361–374.
properties of soils, 366.
Cation-exchange capacity—
determination with sodium, 258.
origin of, in clays, 349–360.
relation to pH, 259.
Chlorine—
content of—
buckwheat, 130.
soils, as affected by fumigation, 153.
tomatoes, 129.
distribution in tomato plant fractions, 130.
Citrus soils, accumulation of bases and heavy metals in relation to phosphorus fertilization, 375–381.

Clays—
cation-exchange capacities, 355.
characterization of kaolinite, halloysite, and related minerals, 273–288.
origin of base-exchange capacity, 349–360.
titration curves, 351.
Conductivity of sand at various moisture contents, 110.
Copper, *Aspergillus niger* method for estimating, in soils, 135–148.
DDT—
recovery of from soils, 239.
stability, 237–242.
Differential thermal analyses—
halloysites, 277.
kaolinites, 275.
soil clays, 277.
Diffusion—
alcohol vapor, 102.
tube, 95.
Electron micrographs—
halloysite, 279.
kaolinites, 279.
soil clays, 280–281.
Erosion control, use of polyelectrolytes, 473–484.
Exchangeable cations—
analyses of saline and alkali soils, 251–262.
effect of fumigation, 152
influence of liming materials, 41.
Fertilizer placement methods, comparison, 266.
Flow equations for water, method for solving, 105–116.
Freezing point—
alternate freezing and thawing, 224.
water in puddled and unpuddled soils, 221–230.
Fumigation, effect on chemical properties of soils, 149–159.
Gaseous diffusion—
experimental assembly, 96.
in porous media, 91–104.
Gypsum—
effect on exchange potassium and sodium, 31.
movement and effect on soil, 23–36.
Hydrogen—
effect of particle size of limestone, 42.
effect on calcium absorption, 18.
Iodine—
contents of—
buckwheat, 130.
tomatoes, 129.
distribution in fractions of tomato plants, 130.
response of crop plants to, 127–134.
Ionization of soils and soil colloids, potassium-calcium relationships in illite, kaolinite, and halloysite, 403–413.
Lime—
influence of form, fineness, and amount on plant development, 75–82.
losses of incorporated calcium, 292.
movement in soil, 23–36.
placement, effects on root growth, 71–74.
requirements of soils, 66.
residual effects, 76.
Liming materials—
effect on—
exchange potassium and sodium, 31.
exchangeable cations, 41.
pH values of soils, 61–70.
movement within soils, 28.
Magnesium losses from soil by leaching, 25.
Manganese—
as affected by fumigation, 154.
effect of calcium absorption, 18.
Methods—
copper in soil, 135–148.
exchangeable cations in saline and alkali soils, 251–262.
reacting rates of different particle sized limestones, 53–60.
sampling soil solutions, 211–220.
soil moisture by neutron scattering, 391–401.
solving flow equation for water, 105–116.
thermal conductivity of soil, 83–90.
zinc status of soils, 341–347.
Microbial activities, as affected by DDT, 237–242.
Moisture tensions—
at various depths, 332.
changes in, 332.
curves, 222.
estimating in root zone of growing crops, 331–339.
freezing point of water at various, 221–230.
relation to phosphorus content of potatoes, 308.
Neutron, soil moisture estimation, 391–401.
Nitrates—
as affected by DDT, 239.
soil, effect of fumigation, 151.
Nitrogen—
content of—
legumes, 233.

Nitrogen, content of—*continued*.
oats, 195.
in soil extracts, 198.
recovery of fertilizer, by oats, 193–201.
use of total yields for predicting, 231–236.
Organic matter—
effect on phosphorus availability, 173–181.
influence on aeration and structure, 419–426.
Particle size of limestones, effect on reaction, cations, and growth, 37–52.
pH—
as affected by—
liming materials, 61–70.
phytase activity, 121.
influence of particle size, 39.
Phosphorus—
accumulation of bases and heavy metals in citrus soils treated with, 375–381.
derived from fertilizer and soil by plants, 301, 309.
effect of organic matter on, in soils, 173–181.
HCl-soluble in soils, 168.
hydrolysis of phytase, 167–171.
uptake and movement of fertilizer, 305–314.
uptake by plants, 175.
Phytase—
activity in soils, 117–126.
as affected by—
microbial activity, 119.
moisture content, 122–123.
pH values, 121.
hydrolysis of, phosphorus in soils, 167–171.
measuring, 117.
Polyelectrolytes, effect on—
clay aggregation, 485–492.
soil properties, 427–441.
structure of saline and alkali soils, 443–454.
Porosity—
alcohol, 102.
effect of depth of tillage, 206.
in porous media, 91–104.
Potassium—
ion activities, 406.
losses from soil by leaching, 25.
Pulvini, absence of calcium, 7.
Radiation effects on plants grown with P32, 299–304.
Radioisotopes—
Ca45, 1–10, 11–22, 23–36, 289–298, 383–389.
P32, 299–304, 305–314.
Root development—
cotton, effect of tillage, 208.
influence of lime placement, 71–74.
Saline soils, effect of polyelectrolytes, 443–454.
Seedling test—
effect of sodium salts, 321.
of alkali soils, 315–326.
Sodium—
losses from soil by leaching, 25.
use for determining cation-exchange capacity, 256.
Soil conditioners—
effect on—
aggregation, 432.
carrot yields, 467.
corn yields, 463.
erosion control, 473–484.
moisture relationships, 432.
potato yields, 466.
sugar beets, 468.
workability, 432.
field and crop responses from, 455–471.
synthetic, 425.
Soil moisture, determination by neutron scattering, 391–401.
Soil profiles, collection and preservation, 243–248.
Soil series, analyses, descriptions of, or experiments with—
Aguirre, 186; Amelia, 186; Appling, 285; Bayamon, 186; Beja, 275; Brookston, 456; Canfield, 38; Caribou, 265; Carrington, 186; Catalina, 186; Cecil, 285, 344, 361; Chester, 61, 301; Chilcott, 446; Chino, 222, 446; Cialitos, 186; Claibourne, 289; Clarion, 119, 168, 193, 397; Coamo, 186; Colby, 344; Collington, 57, 129; Columbia, 141; Copake, 129; Coto, 186; Crosby, 38, 456; Davidson, 265, 344; Dayton, 475; Decatur, 203, 285; Delco, 305; Dewey, 285; Duffield, 61; Edina, 168; Emory, 61; Ephrata, 346; Evesboro, 301; Fannin, 361; Felida, 141; Fort Collins, 222; Frankstown, 344; Fullerton, 285; Georgeville, 361; Glenelg, 344; Greenville, 203, 285; Hanford, 149; Hartsells, 289; Hoosic, 129; Houston, 344; Imperial, 446; Lakeland, 345; Lakewood, 129; Las Flores, 446; Lawrenceville, 129; Mardin, 11; Marion, 121; Marshall, 193; Matanzas, 186; Matawan, 61; Mattapex, 61; Mecklenburg, 285; Miami, 428, 456, 475; Monona,

397; Mucara, 186; Myersville, 344; Nipe, 186, 361; Norfolk, 285, 344, 383; Norton, 23, 129; O'Neil, 397; Orangeburg, 285; Pachappa, 222, 444; Palouse, 344; Paulding, 456, 475; Plummer, 141; Ponceña, 186; Putnam, 397; Ramona, 149; Red Bay, 285; Rubicon, 141; Ruston, 285; Sagemoor, 346; Santa Isabel, 186; Sassafras, 1, 23, 61, 129; Sauvie, 141; Sebrie, 444; Shelby, 344; Squires, 129; Timmermon, 346; Utuado, 186; Wabash, 397; Washington, 129; Westmoreland, 75; White Store, 361; Yolo, 149.

Soil solution, porous tube for sampling, 211–220.

Specific moisture capacity of sand at various moisture contents, 110.

Structure—
- characterization of soil, 184.
- effect of organic matter, 419–426.
- of Puerto Rican soils, 183–192.
- typical conditions of, 187.

Thermal conductivity of soils—
- nonstationary method, *in situ*, 83–90.
- values, 88.

Tillage depth, effect on soil conditions and cotton growth, 203–210.

Tropical soils, macrostructure in Puerto Rico, 183–192.

Zinc status of soils—
- effect of—
  - grinding, 345.
  - heating, 346.
  - time of extraction, 344.
- dithizone for estimating, 341–347.

SOIL SCIENCE

SOIL SCIENCE

Founded 1916 by Jacob G. Lipman

Editor-in-Chief
FIRMAN E. BEAR

Associate Editor
HERMINIE BROEDEL KITCHEN

CONSULTING EDITORS

WM. A. ALBRECHT
University of Missouri, Columbia, Missouri

LYLE T. ALEXANDER
Bureau of Plant Industry, Beltsville, Maryland

R. V. ALLISON
University of Florida, Gainesville, Florida

F. J. ALWAY
University of Minnesota, St. Paul, Minnesota

L. D. BAVER
Sugar Planters' Experiment Station, Honolulu

H. H. BENNETT
Soil Conservation Service, Washington, D. C.

G. B. BODMAN
University of California, Berkeley, California

RICHARD BRADFIELD
Cornell University, Ithaca, New York

R. H. BRAY
University of Illinois, Urbana, Illinois

H. J. CONN
Agricultural Experiment Sta., Geneva, New York

H. P. COOPER
Clemson Agr. College, Clemson, South Carolina

O. W. DAVIDSON
Rutgers University, New Brunswick, New Jersey

A. DEMOLON
49 Rue Geoffrey St. Hilaire, Paris, France

E. E. DeTURK
University of Illinois, Urbana, Illinois

F. L. DULEY
University of Nebraska, Lincoln, Nebraska

WILLARD GARDNER
Utah State Agricultural College, Logan, Utah

V. V. GEMMERLING
Moskovskii Universitet, Moscow, U. S. S. R.

J. E. GREAVES
Utah State Agricultural College, Logan, Utah

H. J. HARPER
Samuel Roberts Noble Found., Ardmore, Okla.

STERLING HENDRICKS
Bureau of Plant Industry, Beltsville, Maryland

D. J. HISSINK
Bussum, Netherlands

C. D. JEFFRIES
Pa. State College, State College, Pennsylvania

HANS JENNY
University of California, Berkeley, California

JACOB S. JOFFE
Rutgers University, New Brunswick, New Jersey

W. P. KELLEY
University of California, Berkeley, California

CHARLES E. KELLOGG
Bureau of Plant Industry, Beltsville, Maryland

H. LUNDEGÅRDH
Lantbrukshögskolan, Uppsala, Sweden

M. M. McCOOL
405 Garfield St., Gary, Indiana

W. H. MacINTIRE
University of Tennessee, Knoxville, Tennessee

O. C. MAGISTAD
Libby, McNeill and Libby, Honolulu, T. H.

C. E. MARSHALL
University of Missouri, Columbia, Missouri

SANTE MATTSON
Lantbrukshögskolan, Uppsala, Sweden

A. R. MIDGLEY
University of Vermont, Burlington, Vermont

C. E. MILLAR
Michigan State College, East Lansing, Michigan

C. A. MOOERS
University of Tennessee, Knoxville, Tennessee

A. G. NORMAN
Camp Detrick, Frederick, Maryland

MICHAEL PEECH
Cornell University, Ithaca, New York

W. H. PIERRE
Iowa State College, Ames, Iowa

ARTHUR L. PRINCE
Rutgers University, New Brunswick, New Jersey

E. R. PURVIS
Rutgers University, New Brunswick, New Jersey

L. A. RICHARDS
U. S. Regional Salinity Lab., Riverside, California

C. O. ROST
University of Minnesota, St. Paul, Minnesota

E. J. RUSSELL
Rothamsted Experimental Sta., Harpenden, Eng.

OSWALD SCHREINER
Bureau of Plant Industry, Beltsville, Maryland

JOHN W. SHIVE
Rutgers University, New Brunswick, New Jersey

Soil Science in the Netherlands 1
Agriculture. W. C. Visser 1
Soils. C. H. Edelman 15
Water Control. F. Hellinga 21
Tile Drainage and Subirrigation. S. B. Hooghoudt 35
Reclamation of Heathland and Its Cultivation. J. A. Eshuis 49
Reclaimed Peat Soils and Their Agricultural Importance. K. J. M. Mohrmann 57
Reclamation of Dune-Sand Soils. K. van der Meer 69
Drainage and Reclamation of Lakes and of the Zuiderzee. A. J. Zuur 75
Embankment and Cultivation of Marine Foreland. B. Verhoeven 91
Physical Planning in Reclaimed and Newly Colonized Areas. Sjoerd Groenman 97
Cation-Exchange Equilibria on Clay Minerals. Erik Eriksson 103
A Thermochemical Approach to the Study of Ion Exchange. N. T. Coleman 115
Some Thermodynamic Properties of Soil Moisture. J. S. Robins 127
Role of the Fluoride Ion in Release of Phosphate Adsorbed by Aluminum and Iron Hydroxides. R. C. Turner and H. M. Rice 141
Adsorption of Mononucleotides, Nucleic Acids, and Nucleoproteins by Clays. C. A. I. Goring and W. V. Bartholomew 149
Effects of 2,4-D and CADE, Singly and in Combination, Upon Nitrate and Bacterial Content of Soils. H. Koike and P. L. Gainey 165
Books 173
Standard Fertilization and Liming as Factors in Maintaining Soil Productivity. Alfred Åslander 181
Relation of Colloidal Hydrous Oxides to the High Cation-Exchange Capacity of Some Tropical Soils of the Cook Islands. M. Fieldes, L. D. Swindale, and J. P. Richardson 197
Influence of the Handling of Sugar Cane Trash on Yields and Soil Properties. G. Samuels, M. A. Lugo López, and P. Landrau, Jr. 207
Use of Mean Soil Moisture Tension to Evaluate the Effect of Soil Moisture on Crop Yields. Sterling A. Taylor 217
Effect of Certain Cations and Anions on Phosphorus Availability. G. C. Lewis, J. V. Jordan, and R. L. Juve 227
Role of Solvated Silica in Promoting Migrations of Fluorine, Phosphorus, and Calcium in 10-Year Rain-Water Drainage from Slagged and Wollastonited Soils. W. H. MacIntire and A. J. Sterges 233
Lessons from the First Half-Century of Soil Survey: I. Classification of Soils. Roy W. Simonson 249
Books 259
Clay Minerals for Four Southern New York Soils. R. Torrence Martin and M. B. Russell 267
Clay Mineralogy of Recent Glacial Alluvium Soils of Western Washington. J. Roger McHenry 281
Rapid Semimicromethod for Cation-Exchange Capacities of Clays and Soils with the Flame Photometer. L. D. Swindale and M. Fieldes 287
Plant Utilization of Zinc Nutrients on Houston Black Clay. Robert J. Speer, Seward E. Allen, Margaret Maloney, and Ammarette Roberts 291
Potassium, Calcium, and Magnesium in Tung Leaves as Related to These Ions in the Soil. D. Charles Nearpass and Matthew Drosdoff 295
Potassium-Supplying Power of Eight Alabama Soils. R. W. Pearson 301
Nitrogen Gas Formation by Interaction of Nitrites and Amino Acids. F. E. Allison, Janet H. Doetsch, and Luann D. Sterling 311

A Note on the Pressure Plate-Membrane Apparatus. N. Collis-George 315
Lessons from the First Half-Century of Soil Survey: II. Mapping of Soils. Roy W. Simonson 323
Books 331
Movement of Water in Soil Due to a Temperature Gradient. C. G. Gurr, T. J. Marshall, and J. T. Hutton 335
Respiration Rates and Plate Counts for Determining Effect of Herbicides on Heterotrophic Soil Microorganisms. S. J. R. Gamble, C. J. Mayhew, and W. E. Chappell 347
Electrochemical Properties of Hydrogen Clays from Indian Black Cotton Soil. B. B. Roy and S. C. Das 351
Variations in Soil Boron with Cultivation and Season. Herbert W. Winsor 359
Effect of Sulfur Fertilization on the Vitamin Content of Alfalfa. J. W. Needham and S. M. Hauge 365
Utilization of Phosphorus from Barley Residues. W. H. Fuller and R. N. Rogers 373
Clay Minerals of South African Soil Groups: I. Laterites and Related Soils. C. R. van der Merwe and H. Heystek 383
Books 403
Availability of Residual Phosphorus of Superphosphate and Rock Phosphate Determined by Phosphorus in Crops from Radioactive Superphosphate. J. R. Neller and H. W. Lundy 409
Utilization of the Phosphorus of Algal Cells as Measured by the Neubauer Technique. W. H. Fuller and R. N. Rogers 417
Standard Fertilization and the Quality of Crops. Alfred Åslander 431
Determination of Cation-Exchange Capacity of Soils by Use of "Versenate." Alfred T. Perkins 443
Cation-Exchange Groupings in the Soil Organic Fraction. F. E. Broadbent and G. R. Bradford 447
Penetration and Loss of Heavy Applications of Borax in Florida Mineral Soils. Herbert W. Winsor 459
Field Test for Active Sulfides in Soil. J. W. Neckers and Charles R. Walker 467
Influence of Soil Aggregation on Plant Growth. J. Hagin 471
A Dithizone Tissue Test for Zinc in Plants. Ellsworth Shaw 479
Books 481
Index 483

SUBJECT INDEX

Adsorption—
  phosphate ions by—
    aluminum hydroxide, 141.
    clays, 153.
    iron hydroxide, 141.
  proteins by clays, 149–164.
  ribonucleic acid by clays, 151.
Aggregation—
  analysis, 473.
  effect on plant growth, 471.
Agriculture in Netherlands—see also Netherlands
  exports, 7.
  imports, 8.
  output, 4.
  polders, 77, 86.
Alfalfa, variations in vitamin contents, 365–371.
Anions—
  losses by leaching, 235.
  ten-year outgo, 242–243.
Available nutrients in Swedish soils, 182.
Bacteria, effects of—
  CADE, 168.
  herbicides, 165–172.
  2,4-D, 168.
Bentonite—
  adsorption of—
    phosphates, 153.
    ribonucleic acid, 151.
  heat of neutralization, 119.
Bi-ionic potentials of ion exchange, 124.
Books—*see* end of letter B.
Boron—
  penetration and losses, 459–466.
  retention, 462.
  variations in soils, 359–364.
  water-extractable, 361.

CADE, effect on—
  bacterial counts, 169.
  nitrate accumulation, 167–168.
Calcium—
  in tung leaves, 295.
  outgo as bicarbonates, 239.
Carbon—
  nitrogen ratio in sugar cane soils, 211.
  organic, content of soils, 283.
Cation-exchange—
  capacity of—
    minerals, 289, 445.
    soils and clays, 271.
  determination by—
    flame techniques, 287–290.
    "versenate," 443–446.
  equilibria on clay minerals, 103–114.
  grouping in soil organic matter fractions, 447–457.
  relation to total methoxyl content, 450.
Cations—
  losses by leachings, 235.
  ten-year outgo, 242–243.
Classification—
  changes in soil, 254.
  evaluation of, 250.
  of soils, 249–258.
Clays—
  adsorption of nucleotides, nucleoproteins and nucleic acids, 149–164.
  cation-exchange equilibria, 103–114.
  differential thermal curves, 200.
  electrochemical properties, 351–358.
  exchange capacity by flame techniques, 287–290.
  minerals of—
    laterites and related soils, 383–401.
    New York soils, 267–280.
  of recent glacial alluvium soils of Washington, 281–286.
  thermal dehydration, 357.
  titration curves of H-clays, 354.
  viscosity, 356.
Cook Island soils—
  chemical composition, 199.
  exchange capacity, relation to hydrous oxides, 197–206.
Differential thermal curves—
  Bath soil, 273.
  Cook Island soils, 200.
  hydrous oxides, 203.
  illite, 272.
  kaolinite, 271.
  laterites and related soils, 384.
  montmorillonite, 271.
Diffuse double layer, heterovalent ion equilibria in, 107.
Drainage—
  determination, layouts, 45.
  lakes and Zuiderzee, 75–90.
  peat soils, 60.
  subirrigation and, 35–48.
  tiles, 37.
Dune-sands—
  morphology, 69.
  Netherlands, 20.
  reclamation, 69–74.
Exchange—
  bases in soils, 236, 284.

Exchange, capacity of—
clay fractions, 284.
Cook Island soils, 197–206.
soils and clay by flame techniques, 287.
Washington soils, 283.
cations in tung soils, 296.
equilibrium constants, 122.
heterovalent, 105.
homovalent, 103.
Fertilization—
crop quality and, 431–442.
standards, 191.
Fertilizers applied in Netherlands, 5.
Flame photometer techniques for exchange capacity, 287–290.
Fluoride ion and release of phosphate, 141–148.
Fluorine losses, 237.
Heat of wetting determination on soils, 129.
Heathland—
agricultural possibilities, 50.
cultivation, 55.
reclamation and cultivation, 49–68.
types, 49.
Herbicides—
effects on bacteria, 165–172, 347–350.
oxygen uptake and, 348.
Illite—
adsorption of—
phosphates, 153.
ribonucleic acid, 151.
content of New York soils, 276.
Internal surface areas of soils and clays, 274.
Ion exchange—
heats of, 121.
thermochemical approach, 115–126.
Irrigation and moisture tension, 219.
Kaolinite, adsorption of—
phosphates, 153.
ribonucleic acid, 151.
Land improvement in Netherlands, 10.
Laterites, clay minerals of, 383–401.
Lime—
action in soils, 190.
bone development, 438.
content of soils, 189.
effect on—
animals, 438.
baking quality of wheat, 434.
nitrogen contents of hay, 433.
yields of barley, 183.
feeding value, 435.
Magnesium in tung leaves, 295.
Marine forelands—
agriculture in, 94.
embankment and cultivation, 91–96.
vegetation, 91.
Methods—
cation-exchange capacity, 287–290, 443–446.
test for sulfides, 467–470.
Moisture—
pressure plate-membrane apparatus, 315–322.
thermodynamic properties, 127–139.
Moisture tension—
blocks, 218.
calculation, 222.
irrigation and, 219.
relation to yields of—
alfalfa, 223.
potato, 222.
sugar beet, 224.
soil, and crop yields, 217–226.
values on cultivated soils, 220.
Netherlands—
agriculture, 1–14.
climate, 21.
drainage and subirrigation, 35–48.
embankment of marine forelands, 91–96.
fertilizers applied, 5.
land improvement, 10.
physical planning in reclaimed areas, 97–101.
reclamation of—
dune-sand soils, 69–74.
heathlands, 49–68.
lakes and Zuiderzee, 75–90.
peats, 57–68.
soils, 15–20.
water control, 21–34.
Neubauer utilization of phosphorus in algal cells, 417–430.
Nitrogen—
content of sugar cane soils, 211.
gas formation, 311–314.
losses from soils, 245.
Nitrate accumulation, effect of herbicides, 167–168.
Organic matter—
cation-exchange capacities, 447–457.
content of sugar cane soils, 211.
Peats—
botanical composition, 59.
drainage, 60.
fertilization, 67.
geological development, 47.
Netherlands, 19.
reclaimed soils, 57–68.

Permeability—
determination, 44.
drying, 80.
sugar cane soils, 212.
water control and, 43.
Phosphorus—
absorbed by rye grass, 379.
acid-soluble, 413.
algal, rate of availability, 422.
availability, effect of ions on, 227–232.
content of—
barley, 376.
oat straw, 418.
outgo, 238.
ratio to carbon, effect on availability of algal, 429.
residual from—
rock phosphate, 410, 412.
superphosphate, 410, 412.
total in soils, 413.
uptake, 375, 381.
utilization from—
algal cells, 417–430.
barley residues, 373–382.
Polders—
administration, 26.
characteristics of, soils, 77.
development, 24.
fertilizers for, 86.
water control, 27, 75.
Potassium—
fertilization, effect of, 308.
fixing capacity, 303.
nonexchangeable, 304.
rate of solution in soils, 306.
supplying powers, Alabama soils, 301–310.
total in soils and clays, 274.
in tung leaves, 295.
Radioisotopes, P32, 227–232, 373–382, 409–415, 417–430.
Ratoon yields as effected by trash handling, 209.
Reclamation—
heathlands, 49–68.
methods, 51.
peat soils, 57.
physical planning for areas, 97–101.
Resins, heats of neutralization, 119.
Silica—
outgo, 233.
solvated, role in movement of ions, 233–248.
Soil productivity, fertilization and liming, 181–195.
Soil series, analyses, descriptions of, or experiments with—Aiken, 106; Arredondo, 295, 361, 461; Bath, 267; Baxter, 234; Blanton, 295, 362; Blichton, 362; Cecil, 302; Cherokee, 445; Chippewa, 267; Culver, 366; Davidson, 302; Dunkirk, 448; Eutaw, 302; Ft.
